#### NOTE:

- ▶ Shielding range of the device will be determined by the local signal strength. In different situation, it will be with different performance.
- ▶ While it is working, the surface temperature is about 45°C. It is normal, if it is higher than 45°C, it is abnormal.
- ▶ Please put the power SW to off immediately and try to contact your local distributor or agent.
- Please try to put the device in a higher position while it is working. It will be better. The suggested height is about 2M.
- ▶ To avoid the loss of function of the device, please try to avoid the device placed on the metal materials.
- ▶ Do not put the device near computers, not book computers, televisions stereos, and radios and so on, in order not to make some interference for these equipments.
- ▶ If the antenna is not properly installed in accordance will the manuals, the shielding range will be not so good.
